[DEQ Meeting Notes.pdf](#)

Notice Topic 3 which is all the steps the DEQ is taking or has taken to make it impossible to list streams

Particularly love this admission

Other actions the agency has taken to address *E. coli* impairments are the Categorical UAA for Recreation, changing the duration of the *E. coli* criteria in Chapter 1 from 30-days to 60-days, and requiring that the samples be spaced out across the entire duration of the criteria (i.e., samples previously needed to be 24 hours apart and now need to be spaced over the entire 30-day period, soon to be 60-day period). Additional requirements to the sampling frequency, within the 60-day time period, are also being explored.

Please pass this around as you see fit and insure that it is part of the record for the 2014 cycle
